

Bio for Suzanne Davis

Suzanne is a graduate of Virginia Polytechnic Institute and State University (Va. Tech) with a BS in Biology, a minor in Chemistry and extensive coursework in Microbiology. She also received her teaching certificate while at Va Tech. Her Masters in Geosciences was completed through the Teachers in Geosciences program at Mississippi State University.

Suzanne started out teaching at Godwin HS in Richmond, VA. Biology and Earth Science were the courses she taught over the course of ten years. Godwin HS, located in Henrico County, was one of the first districts where computers were given to every student and used in the classroom every day. This allowed for the development of course work for both Biology and Earth Science that integrated computer technology with learning in the classroom. She sat on a committee that created the Standards of Learning curriculum for the state of Virginia and also exam questions to be used for the End of Course exams that were given by the state of Virginia. She became the Department Chair for Science at Godwin during the end of her time in Richmond. She has volunteered for several clubs at Godwin, including class sponsor and National Honor Society.

After taking a 10 year hiatus from teaching to stay home with her children, she has returned to teaching at Lyman High School. This is her second year at Lyman High School teaching Biology and Biotechnical Engineering.
